

## A Technological Nightmare

5A Kwan Ka Lun

It was a nightmare. On 10th October 2000 at night, I was sleeping. Suddenly, I felt the ground shaking. I thought that it was none of my business, but I was wrong. I saw the opposite building explode and a robot stood up. The robot started to attack the city. All the people in the city were scared and they did not know what to do.

The robot came near my house and I realized that there was no time to lose. My parents and I ran out of the house and joined the crowd. I saw the robot use its laser guns to attack the houses and buildings. A lot of people were screaming. I felt extremely scared.

Luckily, we arrived at the protective dome. However, the protective dome seemed to be unstable as it shook severely. I had to think of other ways to save my life.

Suddenly, all things turned peaceful and we all went out to the street to see what had happened. We saw that the robot was not moving and sat still in the street. Oh! We were safe! All the people were filled with joy.

After a while, the City Council explained to the people that the malfunctioned robot was a product of the Artificial Intelligence Council. To stop the robot from destroying the city, the government used bombs to kill it. The citizens can finally live in peace.

**Teacher's Feedback :** The storyline is rather clear and comprehensible. However, an unexpected ending may make the piece even more outstanding. (Miss Lai Ming Lei)

**Food For Thought :** If people misuse or abuse technology, this may be a real case in the future, not an imaginative story.
